CYBER SECURITY END USER SECURITY AWARENESS

13 October 2026
09:00 TO 12:00 CET

Cyber security is a key issue that affects everyone in the digital environment we live and work in. The aim of this course is to ensure that the end user has enough security awareness to turn them into a strong last line of defence in identifying cyber-attacks and protecting your organisation. This interesting and practical course will help you and your staff in an interactive course. The key benefits will be the change in users' behaviour to reduce risk from phishing and other cyber attacks, prioritisation and improvement of incident response and reporting of incidents and ultimately the reduction of successful phishing attacks and malware infections.
