Online Course

EVOLVING CYBER THREAT LANDSCAPE AND DORA

2 November 2026
09:30 to 12:00 CET

This course offers a concise overview of today's cyber risk landscape and the regulatory expectations shaping operational resilience. It explains how cybercriminals use phishing, scams, social engineering, and ransomware, and highlights key global cyber-threat trends, including emerging risks linked to AI, automation, and cloud adoption.

Participants will gain an introduction to the Digital Operational Resilience Act (DORA), covering ICT risk management, incident reporting, resilience testing, and third-party risk oversight. The course also provides practical guidance on aligning security controls with DORA requirements and preparing organisations to strengthen their overall operational resilience.
